

Ideation Phase Empathize & Discover

Date	30 July 2026
Name	Kesireddy Padma
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

The primary user of the Metro QR Ticket Booking System is a metro passenger who wants a quick, secure, and convenient way to book metro tickets without waiting in long queues. The user expects an easy booking process, accurate fare calculation, secure payment, and instant QR code generation for travel. During the booking process, the user may think about whether the payment is secure and whether the QR ticket will be generated successfully. The system should minimize booking time, reduce manual effort, and provide a smooth user experience. By understanding the passenger's needs, goals, and challenges, the solution focuses on delivering a reliable, user-friendly, and efficient metro ticket booking experience through the ServiceNow platform.
