

## Requirement Analysis phase

### Customer Journey Map

#### Scenario:

A passenger wants to book a metro ticket quickly without waiting in a queue. The passenger selects the **source station, destination station, ticket type, and number of tickets** through the ServiceNow Metro Ticket Service Catalog. The system validates the entered information, automatically calculates the fare, processes the booking, and generates a **digital QR-code ticket**. The passenger can then use the QR code for ticket validation and check important details such as payment status, booking date, and ticket expiry.

#### Journey Goal:

To provide passengers with a **fast, simple, accurate, and convenient digital metro ticket-booking experience** while reducing manual work and improving ticket traceability.
